

Young Adults with Normal Hearing Wanted for a Research Study on Auditory Processing in Noise

- The Pediatric Auditory Research Laboratory is conducting a study on auditory processing abilities in noise in typically hearing young adults.
- Seeking normally hearing adults aged 18 to 26 years.
- You will hear different speech sounds in quiet and with noise while your brain responses are recorded. You will also repeat what you heard.
- Your participation will help to develop a tool for infants and children who have hearing loss.
- The testing session will last less than two hours.
- Your hearing must be normal.
- You will receive \$20 to compensate for your time and driving expenses.

To learn more about this research or if you are interested in participating, please contact the Pediatric Auditory Research Laboratory at the School of Communication Sciences and Disorders:
